

SPECTRO Heavy Duty Platinum 6 Speed Transmission Lubricant

We could scream 'til we're blue in the face trying to convince you this is the best lube to make your Harley work cool, quiet and smooth as silk. But there's a better way ... read what some actual users recently said to us, totally unsolicited.

"Ken, You convinced me to pay a premium price for your new 6 speed transmission oil. I changed the oil today and it was immediately apparent that your Platinum 75W-140 works. The whine is gone, the transmission noise is almost imperceptible and even though you can hear a very slight difference in the 5th gear you really need to listen very carefully to notice.

I am very, very pleased and want to thank you and Spectro Oils for a great product. It solves a problem that many of us with the new Harley-Davidson six speed have been complaining about since we bought our bikes.

Now this very nice transmission can be used without the annoying noises that we were told to live with.

This oil works and it was the best money that I spent."

Michael Smegielski, Waterbury, CT

"Mike: I thought I better drop you a line and tell you how pleased I am to finally test run your tranny oil in my 07 fat boy. You were right when you said it would make a huge difference. Gone are the noisy, crunchy shifts from the new 6 speed box. It pops into neutral first time every time and no more whiny noise in 5th or 6th gear. I love it. I have given the other samples to buddies to try and will give you an update when I can. I would also like to try your full synthetic 20/50 for the engine bay as I get the feeling it would be way better for the motor as I intend to keep this bike for a long while.

Anyway, got to go so thanks again and ride safe."

Bruce Willis, Calgary, Canada
