

POWERROAD Gelling Agent VS Tradition Products:

No.	Material & Formula	Traditional Product		YUCCELL Product	
		Material Condition	Effect	Material Condition	Effect
1	SiO ₂	uneven particle size	high internal resistance	nanoscale material	Low internal resistance
2	Stabilizer	common material	Easy to become solid when storing, hard to disperse when using	High activity material	Storage process is stable, easily disperse when using
3	Additive	common material	Battery performance improvement is not significant	High activity genetic material	Battery performance improvement is significant
